Week 2 Overview

This week the Trisonics team has been working hard on tasks related to their subteam. The design team has been prototyping a lift, intake, and hanging system from our ideas. Build then takes these prototypes and makes a physical version to see how they work. The programming team has been teaching its new students how to work code and started experimenting with driving the Chassis bot.

Team Focus

This week's focus is prototyping everything. We will use the prototypes to get an idea of what our robot will do and how it will look.

Another focus for this week is teaching new members how to work everything in the different teams. Things like how to operate a mill, programming a chassis bot, and learning Solidworks.
