March 10 – March 15

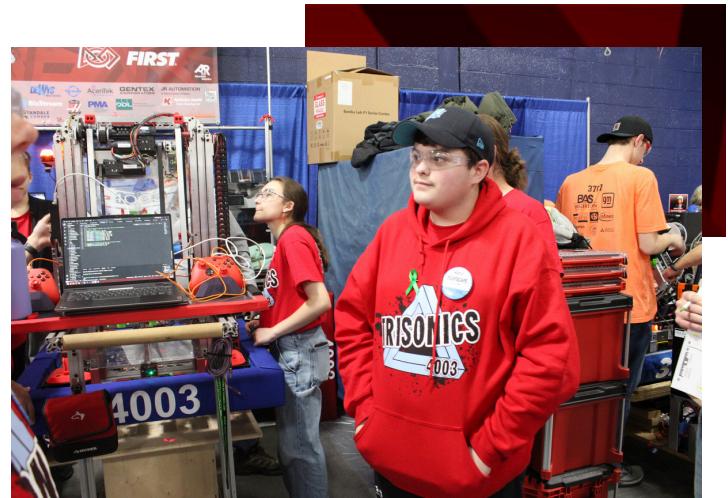

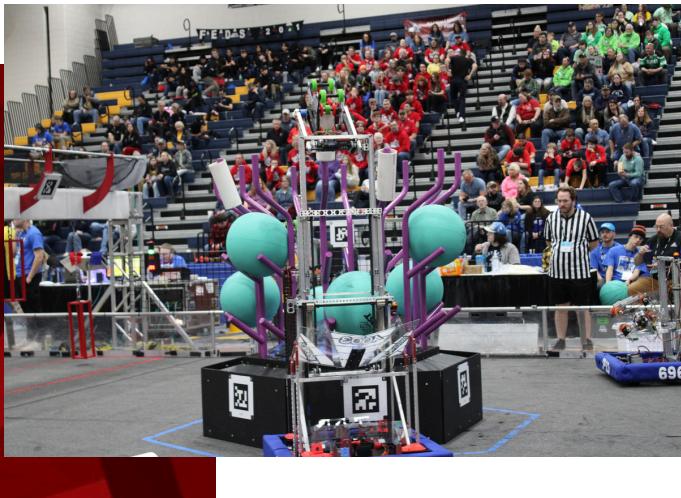

Week 10 Overview

After assessing our results from last weeks competition, we've started to improve upon what went wrong and continue to do what's been working, as well as getting ready for our Grand Valley competition.

The build team has been fixing April tags on the coral reefs, fixing the practice reef, and replacing the motor on the lift system.

The design team has started on making a 4003 sign that lights up for us to hold in the stand and support our team. They've also started redesigning the funnel system for the robot, because they found it was in the way of the hanging system during the event.

The programming team has been working on adjusting turn speed, fixing auton stage, algae intake, and adjusting the hanging system.

Team Focus

Wiring

Started packing a box with extra parts and wires for the robot to get ready for the Grand Valley competition this weekend.

This week with VEX

VIQ Team 61187D placed 2nd in the Grandville Invitational event this weekend.
