March 17 – March 29

Week 11-12 Overview

After our GVSU competition last weekend, we went over our strengths and weaknesses for the competition and created goals to improve for states. The design team is working on adding strength to 3D printed parts and finding ways to improve the funnel/intake transitions. The build team is going to try different wheels for the intake system and print more 3D backup parts in case anything breaks. The programming team is working on improving our autonomous routine and our ability to place coral on level 4. As well as removing lag from the driver camera and improving robot speed for systems.

Team Focus

Competition

At our GVSU competition last weekend, we won the Quality Award. Our team now has 83 points for states and plans to attend in two weeks. Thank you to all the family members, alumni, and sponsors who came and/or supported us this competition!
