January 19 – January 25

Week 2 Overview

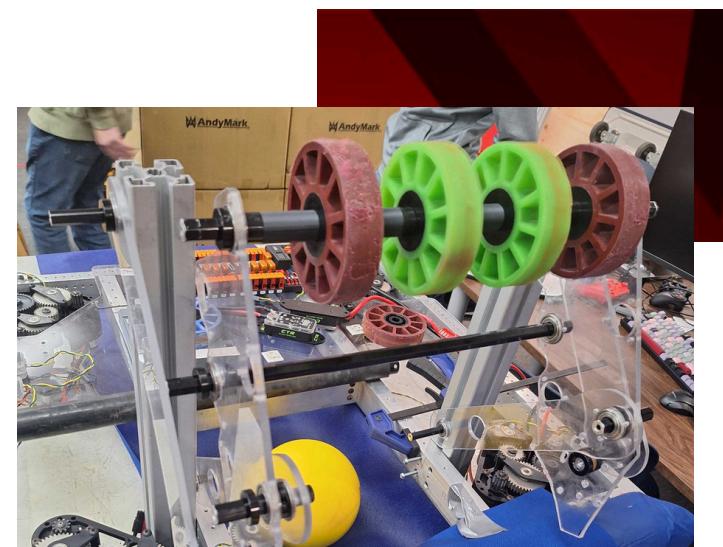

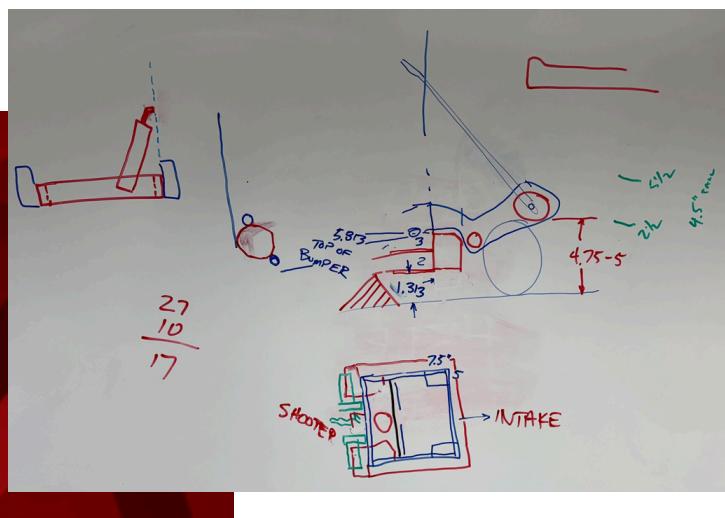

Our team is still in separate groups with people from all sub-groups to work on different prototypes for the robot.

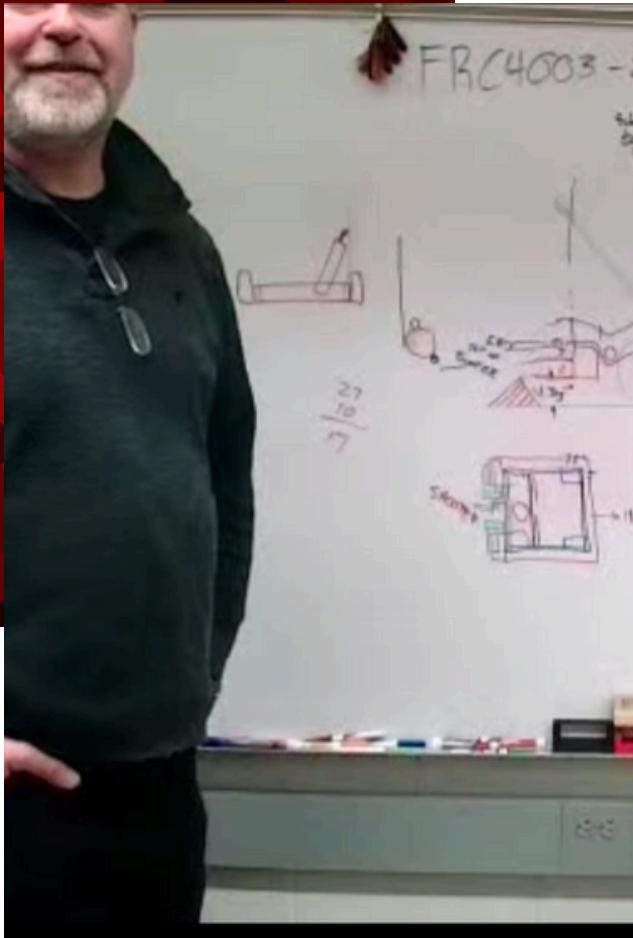

One group is working on their second prototype to get fuel from the hopper to the shooter fast and efficiently.

The wiring team is working to teach more students how to wire the robot for competitions, so they practiced wiring another chassis bot on Friday.

The programming team worked on getting an intake system working to prepare for designing the robot next week.

The design team has been working on things to get ready for the design part of the season like the control panel, intake, and chassis.

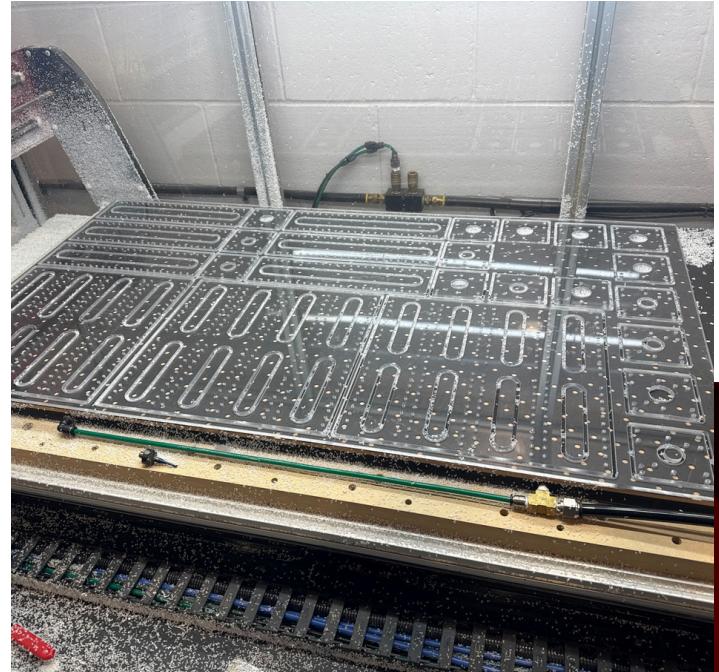

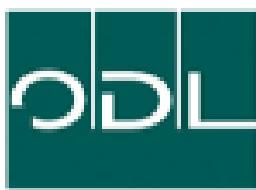

Team Focus

Virtual meeting

Since we had so many snow days this week, we had a virtual meeting with the team on Tuesday to catch up and be prepared for when we meet again on Friday.
